

Imagine the possibilities

Sky Glass is a specially designed custom laminate solution that enables designers to use glass in ways never thought possible.

Sky Glass has a series of advantages over conventional glass or PVB laminates:

- + **stronger and lighter** – increase spans & loadings, reduce the amount of structural support
- + **superior edge stability** – no edge delamination in external use, can be point fixed with exposed edges rather than four edge glazing
- + **fragment retention** – even after breakage fragments will remain bonded to the interlayer
- + **storm and security** – resistant to extreme conditions

Architectural applications

- + **balustrades** – no need for a handrail, remains intact even when shattered
- + **facades** – point fixing, stable edgework, larger spans
- + **overhead glazing** – point fixing, stable edgework, larger spans, less support, safe if broken
- + **pools walls** – larger spans, greater loads
- + **floors** – larger spans, greater loads

Sky Glass is suitable for all internal, external, coastal, residential and commercial applications.

What makes Sky Glass so unique?

Sky Glass uses innovative processing techniques and interlayer technology to create a product superior in performance to standard PVB laminates.
