

MAXIVIEW[®] SHUTTERS

BLOCKOUT

MAXIVIEW® SHUTTERS

SECURITY with a View

FEATURES

Sleek, stylish, versatile, and secure are all words that describe the Maxiview® shutter. From a distance Blockout's Maxiview® may appear to look the same as a conventional shutter but in fact they're very different as Maxiview® shutters are designed to protect homes from unwanted heat and intruders without losing your view or making the room look dark.

Combining the aesthetics of an internal roller blind with the function of a roller shutter makes Blockout Maxiview® shutters the most versatile and stylish shading system yet developed. Maxiview® shutters by Blockout Industries are designed to protect windows against glare by up to 81%, reduce heat gain in summer and prevent heat loss in winter by around 70% and at the same time still giving great access to natural light and views.

FITTING

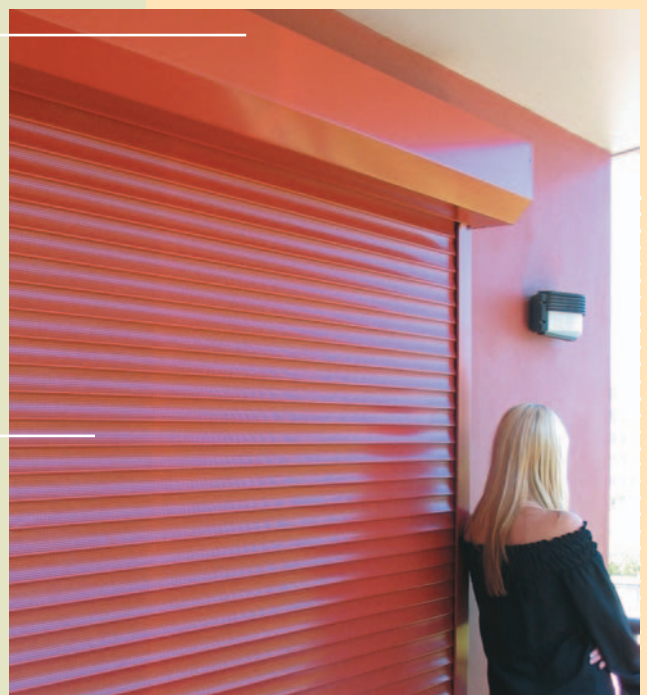

Maxiview® offers a wide range of design opportunities as they can be made a feature, by colour coordinating to the building. With new structures Maxiview® can be designed to retract inside the walls cavity so they are not a permanent obstruction like many shading or security systems. This keeps the buildings visual aesthetics faithful to the architects original design concept.

CONTROL

Maxiview® shutters are easy to operate with either an internal manual control or the more commonly used electric option. Electrically operated shutters are simple and reliable to use as the motor is discreetly fitted inside the shutter's pelmet. With electric control there is practically no limit to the variety of switching options available such as designer switches, remote controls, timers and weather sensors.

FINISH

With a selection of standard designer colours from the subtle to the dramatic there is a Blockout colour scheme to suit most clients. If a special colour is required individual needs can be satisfied as Maxiview® shutters can be powder coated or anodised in a range of colours to suit.

TECHNICAL ASPECTS

Manufactured from extruded aluminium interlocking slats gives Maxiview® greater strength against both storms and intruders. With over 55,000 perforations per square metre throughout the curtain results in a unique shutter that enables the user to capture the view with daytime privacy, whilst providing added protection against the harsh Australian climate and intruders.

Maxiview® can be teamed together with Blockout's registered design Maxiblock® tracking system to provide higher levels of security and storm protection when required. Maxiview® has the added advantage of rolling tighter and using the smallest pelmets possible.

Whatever your lifestyle or the location Blockout Maxiview® shutters will make a welcome addition to your home or business.
