

about dynamic composite technologies

For over 20 years, **DCT** has been serving the building and construction industry with an extensive portfolio of technically advanced thermal and acoustic insulation, plus composite and specialist membrane products.

With a wide range of unique products and integrated systems, **DCT** has a science-based insulation solution for every area of your building, all designed to help manage the energy efficiency, moisture resistance and durability issues that can compromise your buildings performance.

The team at **DCT** clearly recognise the importance of a successful partnership with both suppliers and customers. With a clear focus on customer service through national product availability, installation and maintenance advice, a competitive pricing structure and our comprehensive technical database, **DCT** have the “knowledge to produce solutions”.

DCT supports all of its products with a comprehensive **Technical Advisory Service** for architects, specifiers, stockists and contractors. This includes a computer-aided service designed to give fast, accurate technical advice. Simply phone **DCT** Technical Service Department on **1800 05 11 00** or register on-line, www.dctech.com.au/design with your project specification. Calculations can be carried out to provide R-Values, condensation / dew point risk, required insulation thicknesses etc. Thereafter any number of permutations can be provided to help you achieve your desired targets.

Backed by experience and technology, **DCT** is constantly evaluating new and innovative solutions to better meet the needs of today, while addressing the emerging needs and demands of tomorrow.

DCT will continue to invest in modern branding and raising the company’s profile to become Australia’s leading distributor of **Dow Building Insulation Solutions**, **Crane Composites Fibreglass Reinforced Plastic Panels** and **A Proctor Group Breathable Membranes** in the Australian construction and building industry.
