

# STEEL-MESH DESIGN

What's the most valuable asset of our gutter guard?

## It's uniquely 3-dimensional!

### 3-D gutter guards are best.

Regular gutter guards are flat, and need to be either hand-shaped to fit, or they require the roofing material to be lifted. This all takes time, and on tile roofs it can result in lost or damaged roofing clips.

### Pre-shaped for faster installation.

Our Gutter Protection Systems 3-D gutter guard is pre-shaped in the factory. On-site, the installers simply lay down the contoured lengths, screw them in place, and silicone the edge to seal it. Simple. Fast. And it's the most efficient and cost-effective installation system on the market.

### It's a great Australian made product.

Only durable COLORBOND® steel is used in our manufacturing process. Our 3-D contouring factory is based in Queensland, and we have distributors in major centres around Australia.

For your next project, choose Australia's premier 3-dimensional gutter guard.

# How does our gutter guard work? We call it...

## The Ripple Effect.

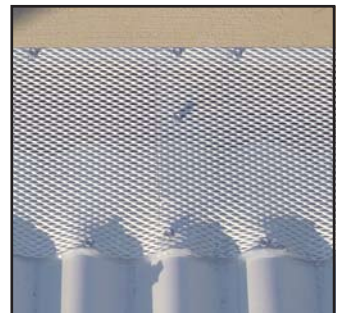

The Gutter Protection Systems gutter guard is made from expanded COLORBOND® steel. The resulting mesh has a distinctive waffle pattern that forms a 'hood' over each gap in the steel.

When rainwater flows down your roof and over this gutter guard, the invisible 'skin' that allows water to flow as a mass, is split by the steel 'hoods'. The water then drops out of the flow and through the holes into your gutter for easy harvesting.

## Five reasons to choose our gutter guards over the rest.

1. It's COLORBOND® steel, so it's the best.
2. It keeps leaves and twigs out of your gutters - so you'll never clean them again.
3. Pests can't chew through steel and get into your roof.
4. No more clogged downpipes to cause overflows and leaks.
5. It's a smart way to get your home bushfire ready.

In high to medium fire danger areas, councils require the flammability-index-rating for gutter protection products be under Rating 5.

### HOW OUR PRODUCT RATES ON THE FLAMMABILITY INDEX

Ignitability scale 0 - 20	Rating 0
Spread of flame scale 0 - 10	Rating 0
Heat evolved scale 0 - 10	Rating 0
Smoke evolved scale 0 - 10	Rating 0 - 1

We chose COLORBOND® steel for our mesh because of its quality and strength. It's durable, its resistant to hail impact and it has a fire rating of 0 - 1. That's 4 to 5 ratings better than the standard

Getting your home bushfire-ready starts with reducing debris build-up in gutters, and increasing your water-harvesting capacity. Gutter Protection Systems helps you do both. Our product fits snugly over your existing roofing, right to the outer gutter-lip. Installation is fast. It's highly efficient. And the integrity of your roof is undisturbed.
