# QUARTZON

BRILLIANT POOL COLOURS®

Quartzon is applied by hand under varying weather and site conditions. Pool colours will change depending on site conditions, surrounding colours, cloud cover and depth of water. Due to these environmental factors and limitations in the printing process, the colours on this brochure should be used as a guide only.

Quartzon's distinctive packaging is your guarantee that you are receiving the 'genuine' product.

## For the best looking pool insist on QUARTZON

Quartzon is a unique pool render with a range of exquisite colours that create stunning visual effects in pool water.

It's the cleaner, richer colours and intense light reflections that make Quartzon so different from other pool surfaces.

Many try to imitate the Quartzon finish, however it's the unique combination of all the special factors that make Quartzon the premier pool interior finish.

These major factors include the following.

### Factory manufactured for reliable results.

Prior to the advent of Quartzon, pool interiors were typically blended on the job site using rudimentary mixing procedures and basic ingredients.

The quality of the resulting finishes varied widely particularly as the procedure usually occurred in the open and often in rather hot conditions.

Quartzon takes the guesswork out of this process. Manufactured at our NATA Quality Assured factory strictly to recipe, it is supplied to the contractor in 20kg bags.

This preformulation allows your contractor to concentrate on applying Quartzon whilst giving you assurance that your chosen colour will be accurately duplicated.

### A smooth finish which is kind to feet!

Another great advantage of Quartzon is the smooth yet slip resistant finish that is achieved.

The subtle grainy finish is achieved by using a variety of multi sized particles which are designed to form a tight fit in the render matrix.

This overcomes the common problem experienced with 'pool pebble' finishes where the coarse aggregates can jut out causing cuts and grazes to water soaked skin.

### Cobalt blue for 'True Blue' QUARTZON colour.

The surface of your pool is subject to constant UV and chemical exposure, so it's absolutely essential that durable pigments are used in the pool render to create long lasting blueness.

That's why we only use cobalt aluminium pigments in Quartzon to create the distinctive blue background finish. These 'metallic' pigments are manufactured at very high temperatures to ensure they last under the toughest of conditions.

In contrast, the cheaper liquid 'ultramarine blue' pigments do not have the necessary resistance to the highly alkaline conditions that exist in concrete pool interiors and can consequently fade and change colour. You can rest assured that your 'blue' Quartzon pool finish will remain 'true'.

### Ceramically coloured quartz for permanent blue.

In addition to the long lasting blue pigments we also add ceramically coloured quartz particles to Quartzon to give a two dimensional blue look to your pool interior.

In contrast to 'painted' sand particles that are prone to fading and abrasion, the ceramically coloured quartz granules in Quartzon are manufactured at high temperatures to provide a permanent blue bond.

Quartzon rendered swimming pools with these permanently coloured granules will withstand the effects of sun and chemicals for years to come.

### StarFleck extra 'sparkle' for even greater light reflection.

To make your pool even more attractive we also add StarFleck to Quartzon.

StarFleck is a highly reflective aggregate that makes the pool water sparkle and reflect light. It even captures moonlight to create spectacular effects to your pool water! Just another added 'extra' which is standard in Quartzon.

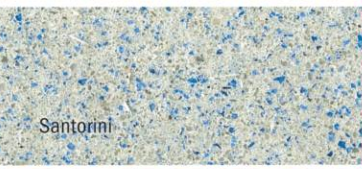

### Only QUARTZON gives you so many options.

There is a Quartzon colour to suit every pool surrounding and budget. Our collection of nine designer colours gives you the flexibility to choose the look that is just right for you - whether you are renovating an old pool or about to build a new one.

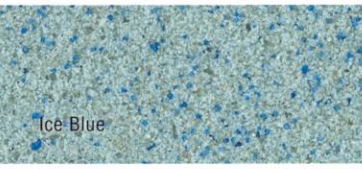

For further information or details of experienced applicators please contact our national help line on 1800 077 744 or 07 3287 6444.
