

External Wire Guided Roller Blinds

Introduction:

Our external wire guided roller blinds are the ideal solution for those seeking a modern and alternative window covering.

This innovative product, with its stainless steel operating mechanisms, eliminates the need for external pelmets and headboxes.

Available in the latest range of fabrics designed to withstand our climate and weather conditions.

As with our External Venetian, the EV80, these type of exterior blinds provide attractive and versatile shading solutions.

They are designed in such a way so

as to reduce solar glare and transmission through glass, which in turn acts to reduce heat gain. This of course helps in lowering household energy costs and carbon/ greenhouse gas emissions.

Incorporating sun and wind sensors means optimal operating parameters can be achieved automatically.

Options:

Pelmets are available upon request in a range of powdercoated finishes.

Motorisation or manual crank handle control.

The latest range of colours in light and ultraviolet stable fabrics.
